

Report
Of
AI DATA ANALYTICS INTERNSHIP

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.
In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student:	25SCS1003002697
Name of Student:	Ashish Kumar
Batch:	2025–29
Semester:	3rd Semester
Section:	2CS1
Organization:	InAmigos Foundation
Internship Period:	05 September 2026 – 21 September 2026

2026–27

CANDIDATE'S DECLARATION

I, Ashish Kumar do hereby declare that the internship report titled “**InAmigos**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

SIGNATURE : *Ashish Kumar*

ASHISH KUMAR

Roll No.: 25SCS1003002697

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

ASHISH KUMAR
Roll No.: 25SCS1003002697

INTERNSHIP COMPLETION CERTIFICATE

InAmigos®
Uniting Minds For Change

CERTIFICATE OF INTERNSHIP

Ashish Kumar

This certificate acknowledges the successful completion of AI Data Analytics Internship at InAmigos Foundation from 05th September to 21st September.

4. PROJECT DESCRIPTION

This internship report presents the work completed during the AI Data Analytics Internship at InAmigos Foundation from 05 September 2026 to 21 September 2026. The internship focused on applying research, data organization and AI-assisted analytical thinking to topics connected with NGOs, social impact, volunteering, fundraising and education.

The internship was activity-oriented rather than a software-development project. The major deliverables involved collecting and structuring information, using AI tools to summarize and generate insights, compiling opportunity data for students, and developing practical AI-based recommendations for NGO growth. The work therefore provided practical exposure to the early stages of an analytics workflow: defining a question, collecting information, organizing it, using AI as an analytical assistant, checking important facts and communicating the findings.

4.1 INTRODUCTION

Artificial Intelligence and data analytics are increasingly useful in the social sector because nonprofit organizations work with information about beneficiaries, volunteers, donors, campaigns, educational programs and community needs. When this information is organized and analyzed effectively, organizations can identify patterns, improve communication and make more informed decisions.

The purpose of this internship was to develop practical familiarity with AI-assisted research and data organization in a social-impact context. Instead of focusing only on technical programming, the internship emphasized how AI tools can support research, summarization, ideation, data compilation and recommendation generation.

During the internship, four major tasks were completed. Task 1 involved research and collection of information about ten NGOs working in India. Task 2 involved preparing an AI-powered data analysis report on the role of AI in NGOs and social-impact initiatives. Task 3 involved compiling at least fifteen volunteer opportunities, internships, fellowships and social initiatives available to students in India. Task 4 involved identifying five practical AI-powered ideas that could improve NGO outreach, volunteer engagement, fundraising or online presence.

Together, these activities provided experience in converting broad social-impact questions into structured information and concise analytical outputs. The internship also highlighted the importance of verifying information, documenting sources and using human judgement alongside AI-generated outputs.

Table 4.1: Summary of Internship Tasks

Task	Activity	Primary Output
Task 1	NGO Research & Data Collection	Structured information on 10 NGOs
Task 2	AI-Powered Data Analysis Report	Short report on AI and social impact
Task 3	Volunteer Opportunity Data Compilation	Structured list of 15+ student opportunities
Task 4	AI Insights for NGO Growth	Five practical AI-powered recommendations

4.2 ORGANIZATION PROFILE

InAmigos Foundation is a nonprofit organization based in Bilaspur, Chhattisgarh, India. According to the organization's official website, it was founded on 23 September 2020 by Mr. Govind Shukla and operates as a Section 8 nonprofit organization. The organization states that it is 80G and 12A certified, CSR-1 registered, recognized through NGO Darpan/NITI Aayog and ISO 9001:2015 certified. These credentials reflect the organization's stated emphasis on structured and accountable social-impact operations.

The foundation describes its work through multiple initiatives covering education, community support, animal welfare, women empowerment, environmental sustainability and skill development. Its official website identifies initiatives such as Project Seva for food and clothing support, Project BachpanShala for education and digital-literacy support, Project Jeev for animal welfare, Project Udaan for women empowerment, Project Prakriti for environmental conservation and Project Vikas for employability and skill development.

The organization also uses volunteers, internships and digital communication to engage students and other contributors. This made it a relevant setting for an internship focused on AI, data collection and social-impact research. The tasks

assigned during the internship connected data-oriented learning with practical nonprofit activities such as NGO research, volunteering, fundraising-related understanding and online outreach.

Table 4.2: Organization Profile at a Glance

Attribute	Information
Organization	InAmigos Foundation
Type	Nonprofit / Section 8 organization
Founded	23 September 2020
Base	Bilaspur, Chhattisgarh, India
Founder & CEO	Mr. Govind Shukla
Key areas	Education, community support, animal welfare, women empowerment, environment and skill development

4.3 PROBLEM STATEMENT

NGOs and social-impact organizations need timely and organized information to plan activities, communicate with stakeholders and identify opportunities for greater impact. However, information relevant to social work is often distributed across websites, social media pages, opportunity portals, reports and other digital sources. Manually collecting and summarizing this information can be time-consuming and may lead to inconsistent organization of data.

A related challenge is converting unstructured information into useful insights. For example, an NGO may need to understand which initiatives other organizations run, what opportunities are available to volunteers, how AI can support fundraising or outreach, and which technology-enabled practices could be adopted with limited resources.

The internship addressed this challenge at a learning and research level by applying a structured workflow of information collection, organization, AI-assisted summarization and recommendation generation. The objective was not to deploy a production analytics system, but to demonstrate how AI and data-oriented methods can support research and decision-making for social-impact work.

4.4 PROJECT OBJECTIVES

1. To understand how AI tools can assist research, summarization and analytical thinking in the NGO/social-impact sector.
2. To collect and organize information about NGOs working in different social sectors in India.
3. To analyze a social-impact topic using AI tools and summarize important trends, applications, insights and challenges.
4. To compile useful volunteer, internship, fellowship and social-initiative opportunities for students in India.
5. To identify practical AI-powered strategies that can improve NGO outreach, volunteer engagement, fundraising and online presence.
6. To strengthen research, data collection, information organization, analytical reasoning and professional documentation skills.
7. To develop awareness of responsible AI use, source verification, data privacy and the need for human judgement.

4.5 SCOPE OF THE PROJECT

The scope of the internship covered AI-assisted research and data organization related to NGOs, volunteering, fundraising, education and social impact. The activities were designed to build practical analytical skills and to create useful information resources.

4.5.1 Scope Included

- Researching NGOs working in different social sectors in India.
- Collecting basic organizational information and key initiatives.
- Using AI tools to support research, summarization and idea generation.
- Compiling volunteer and internship opportunities for students.
- Developing practical recommendations for NGO growth using AI concepts.
- Preparing structured documents and professional social-media communication.

4.5.2 Scope Not Included

- Development or deployment of a production-grade AI or machine-learning model.
- Access to confidential beneficiary, donor or internal organizational databases.
- Implementation of live fundraising systems or automated donor decision-making.
- Production deployment of chatbots, predictive models or analytics dashboards.
- Making financial, medical or other high-stakes decisions using AI-generated information.

4.6 TECHNOLOGIES AND TOOLS USED

The internship used a combination of AI tools, web-based research, office productivity software and cloud storage. The tools were used primarily for research assistance, data organization, documentation and communication.

Tool / Technology	Purpose During Internship
AI assistant (ChatGPT)	Research assistance, summarization, brainstorming, drafting and generating analytical recommendations.
Web browsers / official websites	Collecting and cross-checking NGO and opportunity information.
Microsoft Word	Preparing reports and structured written submissions.
Microsoft Excel / Google Sheets	Organizing research data into rows, columns and structured datasets.
Google Drive	Storing and submitting internship deliverables and supporting evidence.
LinkedIn / professional social media	Sharing learning and internship achievements as required by the internship.

Responsible Use of AI

- AI outputs were treated as assistance rather than unquestioned facts.
- Important factual information was intended to be cross-checked against reliable or official sources.
- AI was used for summarization and ideation while the final structure and interpretation were reviewed by the student.
- Sensitive personal information was not required for the internship tasks.

- Recommendations were presented as practical suggestions, not as guaranteed outcomes.

4.7 SYSTEM ARCHITECTURE

Because the internship was primarily an AI-assisted research and data-analysis exercise, the term “system architecture” is used here to describe the information workflow rather than a deployed software system.

1. Information Sources	2. Data Collection	3. Data Organization
Official NGO websites Opportunity pages Public social media	Extract names, areas, eligibility, initiatives, links and other fields	Tables / spreadsheets Structured notes Categorized information
6. Final Deliverables	5. Human Review & Verification	4. AI-Assisted Analysis
Reports PPT Recommendations Student resources	Check important facts Review AI outputs Refine wording	Summarization Pattern identification Idea generation Recommendations

Figure 4.1: AI-Assisted Social-Impact Research and Data Workflow

The workflow begins with publicly available information sources. Relevant information is collected and organized into structured fields. AI tools are then used to assist with summarization, comparison, idea generation and recommendation drafting. Human review remains an essential step to identify inconsistencies, remove unsupported claims and ensure that the final deliverables reflect the task requirements. The final outputs are prepared as reports, tables, presentations and practical recommendations.

4.8 METHODOLOGY

Phase	Activity
Phase 1 – Understand the Task	Read the internship instructions, identify the required output and define the information fields needed for the task.
Phase 2 – Select the Topic / Sources	Choose a relevant social-impact topic or opportunity category and identify official websites and other appropriate public sources.
Phase 3 – Collect Information	Gather names, descriptions, areas of work, eligibility criteria, initiatives, links and other required details.
Phase 4 – Structure the Data	Arrange the collected information in tables or organized notes so that items can be compared and reviewed easily.
Phase 5 – AI-Assisted Analysis	Use an AI assistant to summarize information, identify themes, generate practical ideas and draft concise explanations.
Phase 6 – Verification and Refinement	Review the AI output, compare important claims with source material and revise unsupported or unclear content.
Phase 7 – Documentation	Prepare the final Word/Excel/online submission according to the internship instructions.
Phase 8 – Communication	Share the learning or achievement through a professional social-media post and retain the required screenshot/evidence.

4.8.1 Task 1 – NGO Research & Data Collection

The first task focused on researching ten NGOs working in India across social sectors such as education, healthcare, women empowerment, animal welfare and environmental conservation.

The collected fields included NGO name, website, area of work, headquarters and key initiatives. The activity developed the ability to identify relevant organizations, extract comparable information and organize it in a structured format.

No.	NGO	Primary Area	Example Initiative / Focus
1	Smile Foundation	Education & healthcare	Education and mobile healthcare outreach
2	CRY	Child rights	Child education, protection and wellbeing
3	Goonj	Community development	Community-led development and disaster response
4	Akshaya Patra Foundation	Education & nutrition	School meal / nutrition programs
5	Teach For India	Education	Fellowship and educational leadership

6	People for Animals	Animal welfare	Animal rescue and welfare
7	WWF-India	Environment	Wildlife and environmental conservation
8	SEWA	Women empowerment	Livelihood and economic empowerment
9	Doctors For You	Healthcare	Public health and disaster-response activities
10	HelpAge India	Elder care	Healthcare and support for older persons

4.8.2 Task 2 – AI-Powered Data Analysis Report

The second task required the use of AI tools to analyze a social-impact topic and prepare a short report. The selected topic was the role of Artificial Intelligence in transforming NGOs and social-impact initiatives.

The analysis considered AI applications in data analysis, fundraising, volunteer management, education and healthcare. It also considered trends such as AI chatbots, predictive analytics, AI-assisted documentation, content planning and impact dashboards.

The main learning from this task was that AI can reduce repetitive analytical work and support faster synthesis of information, but organizations still need human review, appropriate data governance and responsible decision-making.

Table 4.3: Key AI Applications Identified in Task 2

Application	Potential NGO Use	Expected Benefit
Data analysis	Analyze surveys, project data and structured records	Faster identification of trends
Fundraising analytics	Study donor patterns and campaign performance	More targeted communication
Volunteer management	Match skills and interests with opportunities	Better volunteer engagement
Education	Support personalized learning resources	More tailored educational support
Healthcare	Analyze public-health patterns and outreach data	Improved planning and prioritization

4.8.3 Task 3 – Volunteer Opportunity Data Compilation

The third task involved compiling at least fifteen opportunities available to students in India. The categories included volunteering, internships, fellowships and social initiatives.

The required fields were organization name, opportunity type, eligibility, application link and deadline where available. The activity emphasized structured data collection and highlighted the importance of checking current application information before sharing opportunities.

No.	Organization / Platform	Opportunity Type	Eligibility / Audience
1	InAmigos Foundation	Internship / volunteering	Students and graduates
2	UNICEF	Internship	Students / graduates depending on role
3	UN Volunteers	Volunteering	Eligible applicants, typically 18+
4	Teach For India	Fellowship	Graduates meeting program criteria
5	SBI Foundation	Internship / social initiatives	Students / applicants as specified
6	Smile Foundation	Volunteering	Students and professionals
7	CRY	Volunteering	Volunteers meeting program requirements
8	Goonj	Volunteering	Students and professionals
9	WWF-India	Internship / volunteering	Students / applicants depending on program
10	HelpAge India	Volunteering	Students and adults
11	iVolunteer	Volunteering	Applicants based on listed opportunities
12	Youth For Seva	Volunteering	Students and professionals
13	Bhumi	Volunteering	Students and volunteers
14	Make A Difference	Volunteering	Eligible volunteers
15	National Service Scheme (NSS)	Student social initiative	Students in participating institutions

4.8.4 Task 4 – AI Insights for NGO Growth

The fourth task focused on identifying five practical AI-powered features or strategies that could help NGOs improve outreach, volunteer engagement, fundraising or online presence.

The recommendations were intentionally designed to be understandable and scalable. An NGO does not need to implement every idea at once; it can start with a small use case, measure the benefit and expand gradually.

No.	AI Strategy	How It Can Help an NGO
1	AI chatbot for support	Answers common questions, guides visitors and provides basic information at any time.
2	AI-based volunteer matching	Matches skills, interests, location and availability with suitable opportunities.
3	Predictive fundraising analytics	Uses historical patterns to improve campaign planning and donor communication.
4	AI social-media planning	Generates content ideas, drafts captions and supports content scheduling and analysis.
5	AI impact dashboard	Combines project, volunteer and donation indicators into a visual monitoring view.

4.8.5 Data Quality and Verification Practices

- Prefer official organization websites for organizational facts and application information.
- Cross-check important names, dates, eligibility requirements and deadlines before final submission.
- Treat AI-generated content as a draft or analytical aid rather than a primary authority.
- Avoid copying long passages from external sources; summarize information in original wording.
- Record source links so that important claims can be traced back to their origin.

4.9 EXPECTED OUTCOMES

Outcome	Learning / Result
Research Skills	Improved ability to identify relevant sources, collect information and summarize findings.
Data Organization	Improved ability to convert unstructured information into tables and comparable fields.
AI Literacy	Better understanding of how AI assistants can support research, summarization and ideation.
Analytical Thinking	Ability to move from collected information to trends, observations and practical recommendations.
Social-Sector Awareness	Better understanding of NGO operations, volunteering, fundraising and social-impact initiatives.
Communication	Improved professional writing, report preparation and social-media communication.
Responsible AI Awareness	Recognition of the need for verification, privacy, transparency and human judgement.

4.9.1 Skills Developed

- Research and information retrieval
- Data collection and tabular organization
- AI-assisted content analysis
- Summarization and report writing
- Critical review of AI-generated outputs
- Professional documentation
- Presentation and communication
- Basic understanding of social-impact data workflows

4.9.2 Challenges and How They Were Addressed

Challenge	Response / Learning
Information was distributed across multiple sources.	Used structured fields and compared information across reliable sources.
Some opportunity deadlines can change.	Treated deadlines as time-sensitive and recommended checking official pages before applying.
AI outputs can contain unsupported statements.	Reviewed and cross-checked important facts instead of accepting outputs blindly.
Turning broad social topics into concise reports.	Used defined objectives, categories and tables to structure the analysis.
Limited hands-on exposure to production AI systems.	Focused on realistic research and recommendation use cases rather than claiming deployment.

4.10 CERTIFICATES OF COMPLETION AND OTHER COMMUNICATION MAIL PROOF

The internship completion certificate issued by InAmigos Foundation is attached in this report. The certificate confirms successful completion of the AI Data Analytics Internship at InAmigos Foundation from 05 September 2026 to 21 September 2026 and is dated 06 July 2026.

Additional evidence such as internship task instructions, completion/submission communication, Google Drive submission records and professional social-media posts may be attached as annexures when available. Only genuine communication and screenshots should be added; no evidence should be fabricate.

Annexure A — CERTIFICATE OF COMPLETION :

Regd no. - U85300CT2020NPL010641

CSR - 1 Registered - CSR00083159

80G - AAFCI8183CF2022

Annexure B – Internship Task Evidence Checklist

Evidence	Status / Action
InAmigos Foundation internship certificate	Attached in this report
Task 1 – NGO research submission	Attach original submission / screenshot if required
Task 2 – AI-powered data analysis report	Attach original submission / screenshot if required
Task 3 – Volunteer opportunity compilation	Attach original submission / screenshot if required
Task 4 – AI insights for NGO growth	Attach original submission / screenshot if required
LinkedIn / professional social-media screenshots	Attach the actual published post screenshot
Internship communication / task instructions	Attach relevant genuine emails or messages

FINAL NOTE

This report has been prepared from the internship activities completed by ASHISH KUMAR during the AI Data Analytics Internship at InAmigos Foundation. Before final college submission, the student should update page numbers after formatting, insert any required IILM-specific logos or supervisor details if the university asks for them, and attach only genuine task, email and social-media evidence.
